

Task 5

```
import java.util.Arrays;
import java.util.OptionalInt;
import java.util.Scanner;
public class KthSmallest {
    public static void main(String[] args) {
        int[] arr = {7, 10, 4, 3, 20, 15};
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter K: ");
        int k = sc.nextInt();
        OptionalInt result = Arrays.stream(arr)
                                   .sorted()
                                   .skip(k - 1)
                                   .findFirst();
        if (result.isPresent()) {
            System.out.println("Kth Smallest Element: " + result.getAsInt());
        } else {
            System.out.println("Invalid value of K");
        }
    }
}
```

Output

```
Enter K: 3
Kth Smallest Element: 7
```

```
